**Hopewell Township, NJ Police to Distribute Crash Reports with PoliceReports.US**

The Hopewell Township, NJ Police Department has begun to distribute NJTR-1 Crash Reports online with PoliceReports.US this past month. “More than half the incoming correspondence generated from the Records Division is requests for accident reports”, stated Chief George Meyer. “With PoliceReports.US archiving and distributing our accident reports, we hope to reduce the amount of accident report requests we receive as well as provide an immediate and convenient service to the public. In working with both PoliceReports.US and Empire Software Solutions, we were able to have the system in place and available to the public in just a couple of days!”

The Hopewell Police Department serves a Township of 19,000 with 30 officers covering nearly 60 square miles. The Department is technologically advanced with state of the art Computer Aided Dispatch and Records Management Systems. The distribution of accident reports over the Internet is another example of this.

“I have worked with the Hopewell Township Police Department in their technology advancements for the few years and look forward to partnering with them once again to make this project a success” stated retired Chief Richard A. Rose, the Regional Manager for Empire Software Solutions.

*Empire Software Solutions identifies and then represents software companies that offer solutions that will benefit state/ local government and public safety.*
